

## Editorial introduction

We have five articles in this issue. The first article is an editorial comment, written by the Founding Editor-in-Chief Dr. Liang, Managing Editor Dr. Tsai and me. Entitled “Knowledge Profile in PAJAIS”. This article summarizes the published PAJAIS articles into a knowledge profile for our future authors to make their future studies can tie with PAJAIS literature more closely.

The second article, written by Lee, Wang, and Leong, explains the adoption of Passenger Service Systems (PSS) in airlines through the lens of Inter-Organizational Systems adoption and home-region orientation. This in-depth case study provides insights that PSS in a common-use environment can bring business value to PSS user airlines in accessing a broader global market, offering greater competitive services and expanding distribution channels.

Li, Yu, Li, Zhao, and Zhao explore the determinants of cloud service transformation in the SME context. They conduct a survey involving 107 SMEs operating in China to examine the research model. This study deepens the understanding of cloud service transformation in organizations and enriches the literature on cloud computing for firms.

Leung, Lau, and Lau focus on environmental and Green IT. This research aims to investigate the Green IT behavior of young consumers including their day-to-day Green IT practices, buying behavior of mobile and computer devices and subscription behavior of streaming services.

Matt, Brcker, Kolbeck, and Hess focus on consumer health wearables (CHWs). They use a rigorous iterative thematic analysis to provide a comprehensive picture of any potential benefits and deficiencies that users associate with CHWs. They take the example of fitness trackers and conduct 16 semi-structured interviews that help understand the determinants on which users assess the benefits and deficiencies of CHWs.
